Marginal bone maintenance around oral implants

This is the second supplemental issue of EJOI and it is dedicated to the Working Group on Treatment Options for the Maintenance of Marginal Bone Around Endosseous Oral Implants held in Stockholm, Sweden, on the 8th and 9th of September 2011.

As mentioned in the first supplemental issue, scientific associations and other organizations using EJOI as their official publication are welcome to publish the outcome of their consensus conferences or working groups in the journal. It is the policy of EJOI that these publications will not be peer reviewed as they are normally. Consequently, readers are encouraged to critically evaluate the findings presented, as they would with all scientific publications.

Guidance on how to develop critical skills for research, analysis and the evaluation of scientific publications (an important mission of EJOI) can be found in the ‘educational articles’1-4 and on the EQUATOR (Enhancing the QUAlity and Transparency Of health Research) website (http://www.equator-network.org/). The EQUATOR Network is aimed at helping authors properly report their health research studies. After selecting the ‘Resource Centre’, please click on the ‘Library for health research reporting’ and you will access a comprehensive list of reporting guidelines, organised by study type. More specifically, to evaluate systematic reviews please go to the PRISMA transparency guidelines (http://www.prisma-statement.org/).

The results of consensus conferences or working groups can be interpreted differently, depending on people’s perspectives and circumstances. Please consider the conclusions presented carefully. They are the opinions of the review authors, and are not necessarily shared by EJOI editors.

We would like to thank all contributors to the present supplement for their efforts.

Marco Esposito, Michele Nieri, Jerome A. Lindeboom, Søren Schou
